Subject: Removal of sediment around sample point 0481

Mike, I am being told that removal is going to be attempted early tomorrow morning, starting it no later than 7 AM. I will be picked up from the boat ramp at the DeJessa Bridge at 6:15 AM or thereabouts to observe this removal. The need to start early is based on tide levels. They can start here and then as tides get more optimum they can move into the undercut areas so they can pick them up.

You indicated a desire to observe this removal. How do you want to proceed? I can photograph it all for you if you want.
